In Battleground North Carolina, US Senate and Governor's Contests At This Hour Lean 7 Points Blue, 7 Weeks Till Votes Are Counted, But 15 Tarheel Electoral Votes Remain Up for Grabs in a Hold-Your-Breath Home-Stretch Where (Literally) Anything Could Happen:

Neck-and-neck. Pick your poison. Coin toss. Jump ball. Tie game.

That's where the 2020 Presidential Election between incumbent Republican Donald Trump and Democratic challenger Joe Biden stands in North Carolina at this hour, 7 weeks till Election Day, with early voting underway and strong crosswinds buffeting those who attempt to handicap the outcome, according to the latest pre-election tracking poll from SurveyUSA, conducted exclusively for WRAL-TV in Raleigh.

North Carolina may have the 15 electoral votes that catapults either Trump or Biden over the magic 270 threshold, in a year where nothing is normal and, as fate would have it, both the NC Governor's seat and 1 of the state's 2 US Senate seats are also closely contested. At the moment, here's how it looks:

- * For President: **Trump 47%** , **Biden 47%** .
- * For US Senate: Democratic Challenger Cal Cunningham 47%, incumbent Republican Thom Tillis 40%.
- * For Governor: Incumbent Democratic Governor Roy Cooper 49%, Republican challenger Dan Forest 42%.
- * For the open Lieutenant Governor seat, Republican Mark Robinson 41%, Democrat Yvonne Lewis Holley 41%.

In a picture-perfect window of both Trump's undiminished appeal and how fiercely fought the Presidential election is here: Trump leads by a nominal 2 points among both voters who say they are "falling behind financially" (the lowest end of the financial continuum) and leads by a nominal 3 points among voters who say they are "prospering" (the highest end of the financial continuum). Trump and Biden are exactly even among voters who say they are "just getting by." Trump leads slightly among voters who say they are able to "set aside some for a rainy day." Biden leads only among the group of voters who fall on the midpoint of the continuum and who tell SurveyUSA they are "making ends meet."

Yet, when the same group of likely voters is asked to place themselves financially on a scale using slightly different descriptors:

- * Biden leads 3:1 among voters who describe themselves as poor.
- * Trump leads ever-so-slightly among voters who describe themselves as working class or middle class.
- * Trump leads by 12 points among voters who describe themselves as upper-middle-class or wealthy.
- * Trump leads by 17 points among men; Biden leads by 16 points among women. A 33-point Gender Gap.
- * Looking at just the suburbs, Trump is up 25 among suburban men; Biden is up 30 among suburban women. A 55-point gap.
- * Trump leads by 23 points among white voters, trails 22:1 among black voters.
- * Trump holds 92% of the Republican base, 4% cross-over and vote Biden.
- * Biden holds 95% of the Democratic base, 4% cross-over and vote Trump
- * Independents split 42% Trump, 42% Biden. Moderates break for Biden by 21 points, 55% to 34%.
- * Importantly: Trump leads by 5 points among those who are "100% certain" to vote.
- * Biden leads by 28 points among the much smaller group that is "almost certain" to vote.
- * Biden is up 12 in greater Raleigh and up 5 in greater Greensboro.
- * Trump is up 12 in Southern and Coastal NC and up 6 in greater Charlotte.
- * Trump leads by 15 among those who have lived in NC more than 30 years. The Old South.
- * Biden is up 17 among those who have lived here 15 to 30 years.
- * Biden is up 10 among those who have lived here less than 15 years.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
