In Critical NC, Trump Month-on-Month Loses Ground on Virus, Economy, Public Safety; Voters Say President Should Not Hold In-Person Rallies; Biden Now Has Slight Edge In Fierce Fight for Tar Heel State's 15 Pivotal Electoral Votes; Suburban Men, Gun Owners Giving Joe A 2nd Look:

Deadlocked a month ago, Democratic challenger Joseph Biden appears today to have an ever-so-slight advantage over incumbent Republican President Donald Trump in battleground North Carolina, a state which may decide both control of the White House and control of the US Senate.

In research conducted by SurveyUSA exclusively for WRAL-TV in Raleigh, the contest at this hour stands:

- * Biden 50% .
- * Trump 45% .
- * In an identical WRAL-TV poll 1 month ago, the candidates were tied, 47% each.
- * Among all likely voters, Trump is down 2 points, Biden is up 3 points.

But beneath the surface, there are more troubling indicators for the President.

- * Among suburban men, Trump had led by 26 points, now trails by 5, a [31-point swing](#) to Biden.
- * Among gun owners, Trump had led by 36 points, now leads by 8 points, [a 28-point swing](#) to Biden.
- * Among [middle-income voters](#) earning \$40,000 to \$80,000 a year, Trump had led by 12, now trails by 7.
- * Among voters who say they are "[just getting by](#)," Trump and Biden had been tied, now Biden is up by 12.
- * Among self-described "working class" voters, Trump had led by 3, now trails by 7.
- * In military households, Trump had led by 15 points, now runs even with Biden.
- * In greater Raleigh, Biden had led by 12 points, now leads by 18.

Some of this movement, if studied in isolation, could be dismissed as "statistical noise." But when enough numbers point in the same direction, the numbers take-on additional significance. Yes, there are demographic sub-populations in NC where Trump has gained ground month-on month, such as among seniors and in greater Greensboro, but the trendlines by and large are not the President's friend, 3 weeks till votes are counted.

- * Biden has gained ground on, "Which candidate is better able to [handle the economy](#) ?"
- * Biden has gained ground on, "Which candidate is better able to [handle the Coronavirus](#) ?"
- * Biden has gained ground on, "Which candidate is better able to [handle public safety](#) ?"

29% statewide say that President Trump's COVID illness makes them more likely to vote for Biden. This compares to 13% (disproportionately men) who say Trump's diagnosis makes them more likely to vote for Trump. 57% statewide, including 86% of Democrats and 56% of independents, say this is no time for the President to be holding in-person campaign rallies.

About : SurveyUSA interviewed 900 adults statewide 10/08/2020 through 10/11/2020. Of the adults, 746 are registered to vote in North Carolina. Of the registered voters, SurveyUSA identified 669 voters likely to return a ballot on or before the 11/03/2020 deadline. This research was conducted online among a representative cross section of North Carolina adults. Sample selected at random by Lucid Holdings LLC of New Orleans. Adult respondents were weighted to the most recent US Census targets for North Carolina for gender, age, race, education, and home-ownership. In 2016, Trump carried North Carolina by 3.6 percentage points. In 2020, multiple overlapping forces are at work to limit the predictive value of public opinion polls. The manner, timing, and way in which many voters will mark a ballot in 2020 will differ from previous elections because of the Coronavirus COVID-19 pandemic. Whether this makes turnout higher than anticipated, lower than anticipated or just different from past elections is unknowable. Whether there will be systemic voter fraud, as the President fears, or isolated and insignificant fraud, is unknowable. What is newly revealed in the remaining 3 weeks of the campaign, related to the President's health or to his income taxes, is unknowable. Whether there will be no transition of power, a smooth transition of

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
